

# "ARCHI SENSE", the system for aluminum drainpipes and gutters.

## Integrated Extrusion Molding.

Ordinal drainpipes, made of zinc, are a roll-pipe with joints, but Aluminum drainpipes, named "Alu-drainpipes", and aluminum gutters, named "Alu-gutters", are made of integrated extruded molded aluminum.

## Resistant to Dents.

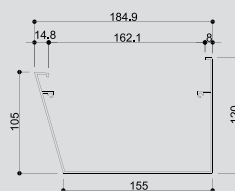

Ordinal zinc drainpipes have pipe thickness from 0.6 to 0.7mm, but "Alu-drainpipes" and "Alu-gutters" have pipe thickness of 1.5mm or more in order to gain enough strength.
